INTRODUCTION

Purair® FLOW Series laminar flow cabinets are designed to protect the interior work zone from particulate contamination.

The Purair FLOW Series product line employs the Air Science exclusive Multiplex™ HEPA Filtration technology to sustain a contamination-free environment.

HEPA filtered air passes uniformly through the cabinet interior via vertical laminar flow. The airflow is oriented to prevent introduction of airborne particulates during normal use.

22–50 watt[1]

The single EC blower motor assures lower cost of ownership in one of the world's most energy efficient laminar flow cabinets.

APPLICATIONS

Vertical laminar flow cabinets are intended for use in non-hazardous applications where user protection from biologicals or biohazardous byproducts is not required.

Mycology and Food Microbiology \ Plant and Mammalian Cell Culture \ Clinical Pharmacies and Hospitals \ Cleanrooms \ Semiconductor Assembly \ Pharmaceutical Production \ Aerospace Contamination Control \ Medical Device Assembly \ General Research Protocols

KEY FEATURES

- Provides sterile work zone for aseptic techniques.
- Air cleanliness meets ISO Class 5.
- Energy saving LED lighting.
- Vertical laminar flow with HEPA filtration.
- Large front opening provides unrestricted access to the work zone.

FLOW SERIES

The Purair FLOW is designed to provide protection to the work surface from biological or particulate contamination. It is ideal for pharmacy compounding of non-toxic agents, assembly of finely tuned instrumentation, cell culture and other processes where protection of the user is not required but easy access to the work surface is important. ISO Class 5 air quality is maintained through a downward laminar flow that provides gentle airflow throughout the cabinet. The clean, simple, low maintenance design offers a comfortable workstation for a range of applications and may be bench mounted or positioned on a mobile bench.

*Purair FLOW-48 shown
with optional spill tray and mobile cart.*

Deep into its second generation, Air Science embraces the diversity and cultural heritage of the founders and co-workers who are continuing a tradition of excellence. Demonstrating a commitment to adaptation, inclusion and quality output from a United States-based company with a domestic and global reach.

Specifications are subject to change without notice or obligation on the part of Air Science. For questions contact Air Science.

[1] *Energy consumption disclosure is based on internal testing with primary filters during normal operation. Power consumption published is nominal and dependent on cabinet size.*

DESIGN FEATURES

A. Control Panel: The control panel includes an On/Off switch for simple operation.

B. Main Filter: HEPA filter with 99.97% efficiency for 0.3 micron particulates (ULPA optional).

C. Pre-Filter: Disposable polyester fiber pre-filter with 85% arrestance.

D. Blower Motor: Centrifugal fan.

E. Stand: Optional base stand converts to mobile cart with optional locking casters.

F. Lighting: Compact LED cabinet lamp located away from laminar flow area.

G. Pass Through Ports: Convenient rear-wall pass through ports for safe routing of instrument cords, cables, and leads.

H. Filter Door Lock: Prevents unauthorized removal or accidental exposure to saturated filters.

I. Filter Clamp: Wide knob filter clamps are conveniently located forward of the assembly. The clamps secure the filter to the plenum with even pressure to assure a tight seal and to simplify filter removal and replacement when required.

J. Work Surface: Optional polypropylene spill tray, available in white or black, or optional stainless steel spill tray available.

ADDITIONAL FEATURES

360 Degree Visibility: Clear back and side panels allow ambient illumination into the chamber and provide users with an unobstructed view of its contents.

Construction: All models are available in either metal or polypropylene construction, specify when ordering. Available in 120V, 60Hz or 230V, 50Hz models.

Purair FLOW-24, shown with optional spill tray and mobile cart.

Specifications are subject to change without notice or obligation on the part of Air Science. For questions contact Air Science.

Air Science FLOW cabinets are expertly designed to meet specific applications and certified for quality construction. Standard features, options and accessories are developed purposefully to enhance user-friendliness.

PERFORMANCE

The Air Science Multiplex filter offers a range of options for high performance protection.

Multiplex filter configuration permits a customized combination of filter media for a broad range of chemical families and biological agents if required.

Purair FLOW cabinets maintain an average airflow velocity of 0.30 m/s (60 fpm) at initial setpoint, measured 6" (150 mm) from the filter face.

The HEPA filters are easy to replace; no tools required.

DESIGN

Professional quality Air Science cabinets comply with current technical and safety regulations.

The cabinet frame and work surfaces, comprised of industrial components, are durable and chemically resistant with a microbial powder finish coating.

The Air Science filter assembly is easy to access, easy to change, plus a unique filter clamping design eliminates bypass leakage of the main filter.

Stackable sections make cabinets highly portable and enable quick setup.

24   36   48
SELECTION

Purair FLOW cabinets are available in three model sizes with various options. Designed for desktop use, or for installation on an optional base stand or mobile cart.

RELIABILITY

Purair FLOW cabinets incorporate energy-efficient centrifugal blowers for maximum operational savings, low noise and minimal vibration.

Air Science uses long-life HEPA filters without aluminum separators to increase filter efficiency, minimize the potential for leakage and increase filter life.

CONTROL

The **basic control panel** features an On/Off switch for simple operation of the blower and light.
Basic Control Panel

Energy-efficient *EC blowers promote long life and dependable performance of Purair FLOW work stations.*

Purair FLOW-36, shown with optional mobile cart.

Specifications are subject to change without notice or obligation on the part of Air Science. For questions contact Air Science.

multipleX

FILTRATION

At the heart of the Purair product line is innovative filtration technology. **The Multiplex Filtration System** consists of a pre-filter and main filter. The mechanical design enhances safety, convenience and overall value.

- The disposable pre-filter is accessible from the exterior top of the cabinet.
- A filter clamping mechanism allows for the filter to be easily installed and ensures an even seal at the filter peripheral face at all times to prevent bypass leakage.
- The filter chamber prevents contaminated air from contacting internal cabinet mechanisms.

secur.
safe disposal service

Filter disposal services are available in selected markets providing responsible destruction or recycling of used saturated filters in authorized facilities.

AIRFLOW

Room air enters from the top of the cabinet through the disposable pre-filter where larger particles are trapped, increasing the service life of the main HEPA filter.

Air is forced evenly across the HEPA filter to deliver a flow of pure air within the work zone to dilute and flush airborne contaminants from the work area. An average airflow velocity of 0.30 m/s (60 fpm) at initial setpoint ensures that there is a sufficient number of air changes within the work zone to eliminate cross contamination and to maintain optimum cleanliness.

Purified air travels across the work zone to the work surface in a vertical downflow stream and then exits the work zone across the open cabinet front.

FILTER CONFIGURATION

P. ⚠ **The pre-filter** may be replaced while unit is in operation.

H. **The main filter** is easy to replace; no tools required. The filter clamps tightly against the filter gasket to prevent filter bypass and to maintain filter integrity.
MULTIPLEX FILTRATION SYSTEM, SUMMARY

INTRODUCTION

The Purair® PCR laminar flow cabinet employs the Air Science Multiplex™ HEPA Filtration technology to create a safe, energy-efficient, contaminant-free environment. It is ideally suited for use when flexible access to instrumentation inside the cabinet is required.

22–50 watt[1]

The single EC blower motor assures lower cost of ownership in one of the world's most energy efficient laminar flow cabinets.

APPLICATIONS

PCR cabinets are intended for use in non-hazardous applications where biological or biohazard byproducts are not generated and user protection is not required.

PCR Laboratories \\ Forensics \\ Pharmaceutical \\

Sample Preparation \\ General Research Protocols

Deep into its second generation, Air Science embraces the diversity and cultural heritage of the founders and co-workers who are continuing a tradition of excellence. Demonstrating a commitment to adaptation, inclusion and quality output from a United States-based company with a domestic and global reach.

KEY FEATURES

- Provides sterile work zone for aseptic techniques.

- Air cleanliness meets ISO Class 5.

- Energy saving LED lighting.

- Vertical laminar airflow with HEPA filtration.

- Equipped with germicidal UV lamp to create light emission conditions known to provide safe decontamination.

- 360 degree visibility with UV absorbing polycarbonate construction.

PCR WORKSTATION

Polymerase chain reaction* (PCR) is a simple and inexpensive technique to make multiple copies of a targeted nucleotide sequence from a DNA sample and to amplify sequences from small samples. This technique is widely used in genetics laboratories that work with DNA and RNA.

Because PCR amplification is extremely sensitive to contamination, prevention of contamination requires good laboratory practices to minimize external or cross-contamination during reagent preparation, sample preparation and sample amplification.

* Polymerase chain reaction (PCR) is a patented process owned by Hoffman La Roche.

Purair PCR-48 shown with optional mobile cart.

Specifications are subject to change without notice or obligation on the part of Air Science. For questions contact Air Science.

[1] *Energy consumption disclosure is based on internal testing with primary filters during normal operation. Power consumption published is nominal and dependent on cabinet size.*

DESIGN FEATURES

A. Control Panel: The integrated control panel features an On/Off switch for the fan, light and UV lamp timer.

B. Main Filter: Main HEPA filter with 99.97% efficiency for 0.3 micron particulates (ULPA optional).

C. Pre-Filter: The pre-filter can be changed while the unit is operating to prevent operator exposure to chemical vapors.

D. Fan: High-performance EC fan.

E. Stand: Optional base stand converts to mobile cart with optional locking casters.

F. Lighting: Compact LED cabinet lamp located away from laminar flow area.

G. UV Lamp: Built-in ultraviolet lamp with timer creates light emission conditions known to permit safe decontamination between PCR cycles. Includes a double-flap safety cover of 0.2" (5 mm) UV absorbing 254 nm beta radiation resistant polycarbonate; provides superior operator protection while allowing easy access to the work zone. Timer can be set over range of 0 to 60 minutes or set to HOLD.

H. Pass Through Ports: Convenient rear wall pass-through ports for safe routing of instrument cords, cables and leads.

I. Filter Door Lock: Prevents unauthorized removal or accidental exposure to dirty filters.

J. Ergonomic Design: Ergonomically angled front improves reach and user comfort.

K. Work Surface: Large polypropylene work surface, white or black standard with optional stainless steel work surface available.

L. Decontamination Shelf: Mounted on the back wall near the UV lamp for maximum exposure.

M. Magnetic Door Latch: Safety interlock prevents operator exposure to UVs when door is opened during decontamination cycle.

N. Double-Hinged Self-Locking Front Sash: The magnetic sash closure protects samples on the work surface from contamination with up to 90 fpm airflow.

ADDITIONAL FEATURES

360 Degree Visibility: Clear back and side panels allow ambient light into the chamber and provide users with an unobstructed view of contents.

Construction: All models are available in either metal or polypropylene construction, specify when ordering. Available in 120V, 60Hz or 230V, 50Hz models.

General Purpose Laminar Flow Cabinets

- **Horizontal and Vertical**

- **Provides Reliable Protection for Samples and Work Processes for Numerous Applications**

LF Series model VLF-48

Air Science®

"The World's Most Extensive Selection of Containment Solutions."

INTRODUCTION

Air Science® Purair® Laminar Flow cabinets are designed to protect equipment and other contents of the work zone from particulates.

The series includes Vertical Laminar Flow (VLF) cabinets and Horizontal Laminar Flow (HLF) cabinets and is ideally suited for use with non-hazardous contaminants when flexible access to equipment in the work zone is desired.

At the heart of the Purair Laminar Flow cabinet product line is the Air Science Multiplex™ ULPA Filtration technology which creates a clean work environment over a wide range of applications.

APPLICATIONS

Purair Laminar Flow cabinets are suitable for applications that generate no biohazardous materials and do not require operator protection. Mycology and Food Microbiology \ Plant and Mammalian Cell Culture \ Clinical Pharmacy and Hospitals \ Cleanrooms \ Semiconductor Assembly \ Pharmaceutical \ Aerospace \ Medical Device Assembly \ Research Laboratories

KEY FEATURES

• Provides sterile work zone for aseptic techniques.

• Air cleanliness meets and exceeds ISO Class 4.

• All models use ULPA filters (99.999% efficient at particle size 0.12 μm).

• Available in horizontal or vertical flow configurations.

• All models equipped with a stainless steel work surface.

PERFORMANCE ADVANTAGE

Each Air Science Purair Laminar Flow cabinet includes features expressed through sound design and certified quality construction.

Professional Quality. Air Science cabinets comply with current technical and safety regulations.

Advanced Filtration. Air Science Multiplex ULPA Filtration provides high performance protection.

Industrial Components. The cabinet frame and work surfaces are durable and chemically resistant for long service life. All cabinet components are cleanroom compatible.

LF Series HLF-48

Deep into its second generation, Air Science embraces the diversity and cultural heritage of the founders and co-workers who are continuing a tradition of excellence. Demonstrating a commitment to adaptation, inclusion and quality output from a United States-based company with a domestic and global reach.

Specifications are subject to change without notice or obligation on the part of Air Science. For questions contact Air Science.

DESIGN FEATURES

DESIGN FEATURES

A. Control Panel: The control panel includes On/Off switch for fan, lighting, GFCI outlets, Minihelic ULPA pressure gauge to measure filter condition, UV lamp key switch.

B. Main Filter: Long-life Camfil Farr ULPA main filter with efficiency of 99.999% at particle size 0.12 μm.

C. Pre-Filter: Disposable polyester fiber pre-filter with 85% arrestance.

D. Blower Motor: External rotor blower.

E. Lighting: Compact LED cabinet lamp located away from laminar flow area.

F. UV Lamp: Optional ultraviolet (UV) lamp to create light emission conditions known to safely sterilize and decontaminate work zone and cabinet contents between operating periods.

G. Ergonomic Design: Ergonomically angled front improves reach and comfort.

H. Work Surface: Stainless steel work surface with no spill retention.

I. Fan Control: Recessed fan speed control.

J. IV Bar: Optional IV bar with "S" hooks.

K. Night Door: Optional night door/cover to protect cabinet interior when blowers are off. Contains UV radiation when UV activated.

L. Power Supply: GFCI outlet to power equipment in cabinet.

M. Service Fixtures: Optional petcock service fixture (maximum 4 per unit).

ADDITIONAL FEATURES

Visibility: Side windows allow ambient light into the chamber and provide users with three points of visibility for an unobstructed view of contents. (Not available on stainless steel models.)

USP 797 Sterile Compounding Compliant: When used according to best practices, the LF Series cabinet encourages compliance with criteria set forth by USP 797 for sterile preparation in pharmaceutical compounding of nonhazardous agents.

These include injectables, IV admixtures, pastes and ointments and irrigating solutions which are protected by filtered air blown over the work surface in a laminar flow.

Construction: Choose from standard powder coated interior with stainless steel work surface and side windows or optional stainless steel interior (-SS model). Available in 120V, 60Hz and 230V, 50Hz models.

VLF-48, shown with optional mobile base stand and other selected options.

Specifications are subject to change without notice or obligation on the part of Air Science. For questions contact Air Science.

Options and accessories add functional performance to meet specific applications. Accessories include an IV bar, service fixtures, base stand, UV lamp and front door/cover.

PERFORMANCE

Air Science Multiplex ULPA Filtration provides high performance protection.

The main filter gasket evenly seals the filter face to prevent bypass air leakage. Our pour-in-place silicone gasket out performs traditional style stick-on "dove-tail" gasketing.

The high capacity air handling system delivers an average airflow velocity of 0.45 m/s (90 fpm) at initial setpoint.

Purair VLF and HLF cabinets have an ULPA filter pressure gauge to measure filter performance.

DESIGN

Air Science Laminar Flow cabinets incorporate an external rotor blowers. The energy efficient design reduces operating costs and has low noise and vibration levels.

Products are designed for desktop use or installation on the optional mobile base stand.

The rear wall of **vertical flow cabinets** is perforated to reduce work surface turbulence by removing some of the airflow to the rear.
SELECTION

Purair Laminar Flow cabinets are available in vertical and horizontal configurations with various sizes and options for a total of 36 models to choose from in 6 different widths. Select from standard powder coated interior or stainless steel interior (-SS models).

CONTROL

The **standard control panel** features On/Off switches for blower, lighting, GFCI outlets, in addition to a Minihelic ULPA pressure gauge to measure filter performance.

The **standard UV control panel** includes the same features as the standard control panel with the addition of a UV lamp key.

Standard Controller

UV Controller

RELIABILITY

Each cabinet is factory tested for safety and performance in accordance with international standards.

Purair Laminar Flow cabinets are shipped fully assembled. No installation is required; just plug them in and use them.

Through our partner company Filtco Filters, Air Science is a single source supplier of all pre-filters, carbon filters and HEPA/ULPA filters used in our products.

Specifications are subject to change without notice or obligation on the part of Air Science. For questions contact Air Science.
AIRFLOW

Both VLF and HLF Purair Laminar Flow cabinets offer the same level of quality and performance. When deciding between a VLF or HLF cabinet the differences come down to personal preference for your specific application.

Vertical Airflow

- The airflow on the Purair LF Series vertical flow cabinets directly strikes the work surface.

- Vertical laminar flow cabinets are manufactured with rear wall perforations that remove a small amount of air at the rear of the cabinet to reduce turbulence.

- In vertical flow cabinets, the ULPA filter is mounted above the work surface which provides a taller and deeper work space. This allows for larger equipment in the work zone without interrupted airflow.

- Vertical flow cabinets are more easily customized to specific applications.

Horizontal Airflow

- In horizontal flow cabinets the airflow does not directly impinge on the work surface but rather is smoothly drawn across it. This creates less turbulence.

- Airflow in a horizontal flow cabinet exits directly towards the user.

- Large or tall equipment in a horizontal flow cabinet can interrupt airflow more than in a vertical flow cabinet. This may create more turbulence and possible "dead" spots where airflow is lower.

Exhaust Air

Room Air Intake
Fan / Blower
Pre-Filter
ULPA Filter
Exhaust Air

Vertical Airflow:
1. *Room air enters from the top of the cabinet through a disposable pre-filter; this traps larger particles and increases filter life.* **2.** *Air is forced evenly across the ULPA filter in a stream of clean, uniform air within the work zone. This dilutes and flushes airborne contaminants from the interior.* **3.** *An average airflow velocity of 0.45 m/s (90 fpm) at initial setpoint ensures a sufficient number of air changes to maintain cleanliness within the work zone.* **4.** *The purified air travels down to the work zone in a vertical, unidirectional downflow stream, exiting the work zone across the entire open cabinet front area after deflecting off the work surface. Rear wall perforations are designed to reduce work surface turbulence and minimize the possibility of dead air corners in the work zone.*

Horizontal Airflow:
1. *Purair Laminar Flow cabinets maintain an average airflow velocity of 0.45 m/s (90 fpm) at initial setpoint measured 6"/150 mm from the filter. This face velocity is in compliance with USA and international standards for safety and performance. The ULPA filters are easy to replace with common tools.* **2.** *Room air enters from the top of the cabinet through a disposable pre-filter; this traps larger particles and increases filter life.* **3.** *Air is forced evenly across the ULPA filter in a stream of clean, uniform air within the work zone. This dilutes and flushes airborne contaminants from the interior.* **4.** *An average airflow velocity of 0.45 m/s (90 fpm) at initial setpoint ensures a sufficient number of air changes to maintain cleanliness within the work zone.* **5.** *The purified air travels across the work zone in a horizontal, unidirectional stream and exits the work zone across the entire open cabinet front.*

Air Science Purair Laminar Flow cabinets use energy efficient blowers for long life, dependable performance.
